

## **Project-Based Learning in IT Skill Development**

# Contents

5

## The Problem

Most IT courses are taught from the books and not taught in a way for students to identify the problem

6

## The Solution

To have students and professors use the pedagogical approach

7

## Research Plan

It's a website that will tackle a little bit on how traditional learning with IT skill

9-13

## UX Interview

If students are attempting the problems in class it's easy to know who is falling behind and who is on track

15-17

## The Survey

What is your age?  
What is your gender?  
What is your race?

19-20

## Affinity Diagram

Components of Project-Based Learning

universities	Teams	Labs	Goals
RIT	Yes	Yes	To introduce students to engineering programming (CPS)
MIT	No	Yes	To teach students the basics of Java programming
Caltech	No	Yes	To show the fundamentals of Java programming
R	No	Yes	This course provides students with programming applications
LU	No	No	Introduces students to computer programming

## Conclusion

Schools are moving towards Project-Based Learning.

## The Problem

Most IT courses are taught from the books and not taught in a way for students to identify the problem, to collaborate, to design/develop a prototype, and to get feedback.

## The Solution

To have students and professors use the pedagogical approach as in interactions between students and professors where professors can have students to define the problem, generate ideas, prototype solutions, and test to where they can use project-based learning in a classroom setting.

## Research Plan

It's a website that will tackle a little bit on how traditional learning with IT Skill Development doesn't engage with every learning style and how Project-Based Learning help focus on kinesthetic (learning by carrying out physical activities), linguistic (learning by speaking), auditory (learning by listening), and visual (learning by seeing).

## UX Interview

**What are the problems with IT 106?**

- ▣ If students are attempting the problems in class it's easy to know who is falling behind and who is on track
- ▣ There should also be pairing with other classmates because they can benefit by learning from one another

## UX Interview

## UX Interview

- ▣ Students have their own strategy and analogies where they can apply what they learned
- ▣ Professors can give quizzes and projects after students work together
- ▣ College should be more of a flow and not a one-size fit all environment

## Persona

Alex Mbaziira  
Married  
Assistant Professor at Marymount University  
Fairfax, VA

### Frustrations

- ▣ Student Stress
- ▣ High fail rate in the IT department
- ▣ One-size fits all

Alex is an Assistant Professor at Marymount University. He is also a professor at George Mason University. Alex is researching in the following areas: cyber threat analysis, cyber-crime, natural language processing, applied machine learning, and deception-detection. His way of teaching encouraged me to declare a minor in graphic design (then I later changed it to web design). I realized that his method of teaching helped me understand the fundamentals of web design. I've known Alex for a couple of years. He was my lab professor at the Volgenau School of Engineering here at Mason for Multimedia and Web Design.

### Goals

- ▣ Upbeat Hard Worker
- ▣ Career Driven
- ▣ Likes to see students succeed
- ▣ Encourager
- ▣ Motivator

# THE SURVEY

## The Survey

## The Survey

Should IT 106 (Introduction to IT Problem Solving Using Computer Programming – Java Version) be an experimental learning course?

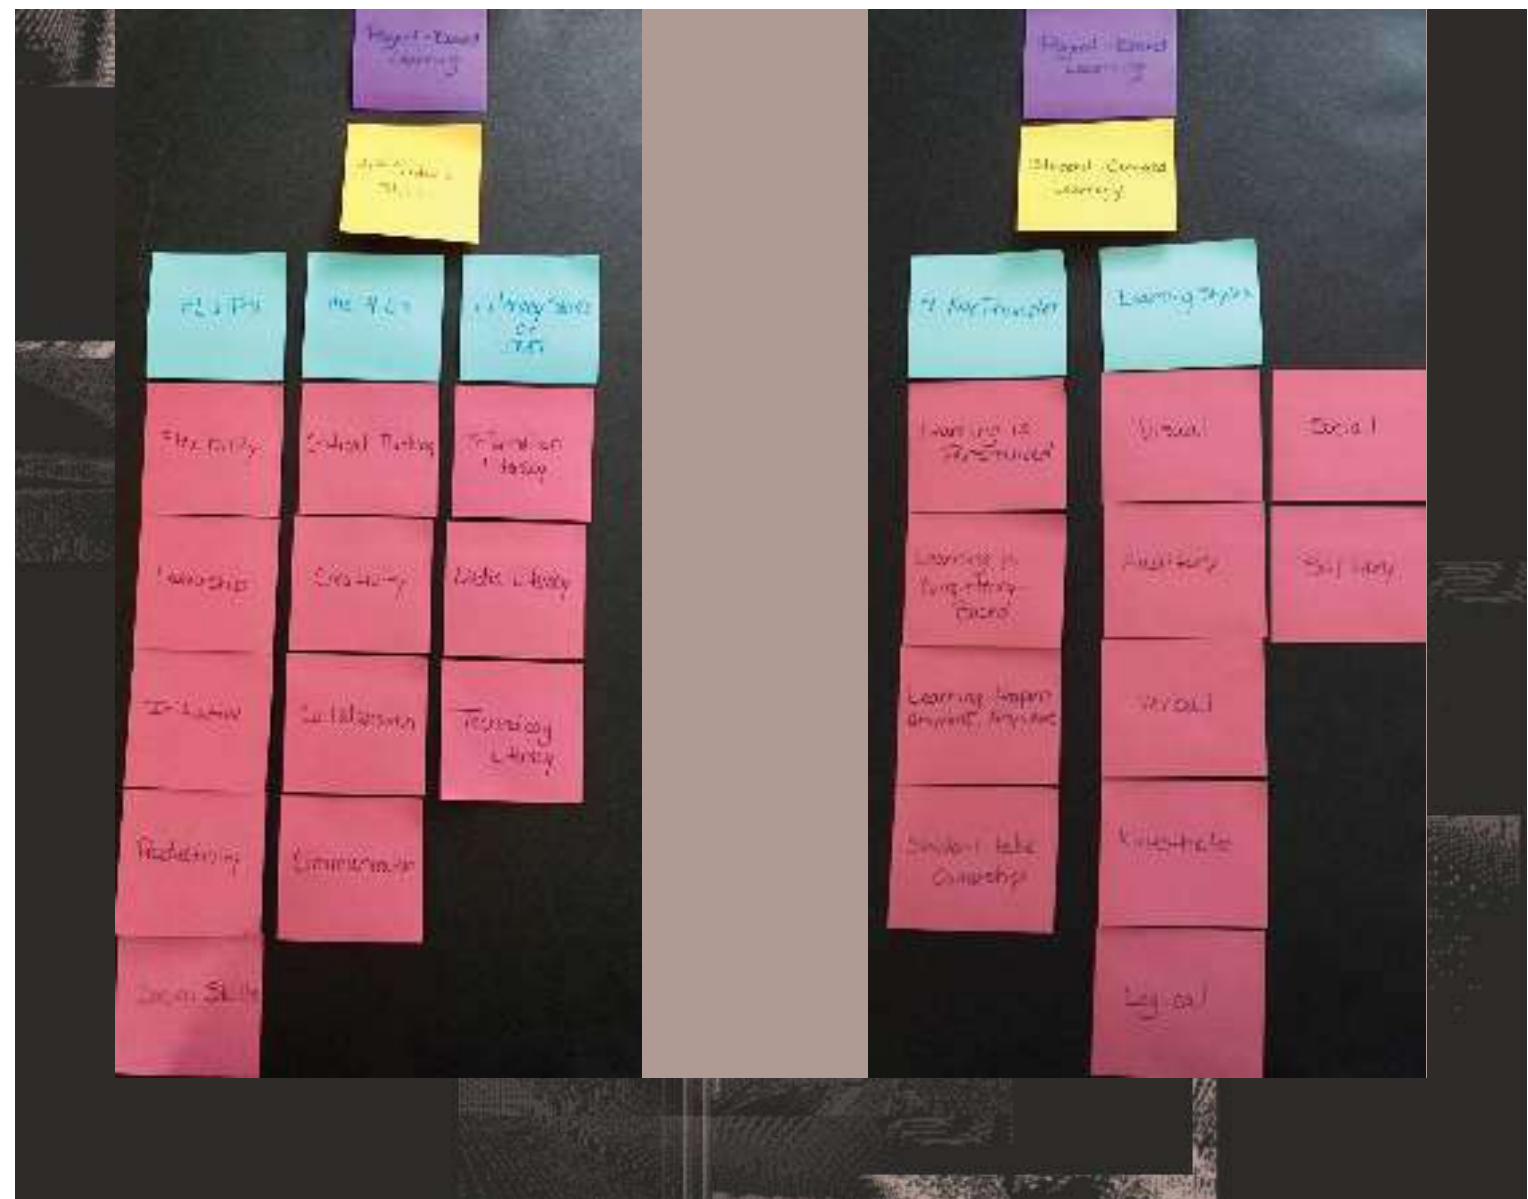

Do you think you would gain more from an experimental learning or traditional course in IT 106? If so, state your reason.

# AFFINITY DIAGRAM

## Affinity Diagram

# COMPETITIVE ANALYSIS

# Competitive Analysis

Universities	Teams	Labs	Goals
	Yes	Yes	To introduce students to Engineering Problem solving (EPS)
	No	Yes	To teach students the basics of Java Programming
	No	Yes	To show the fundamentals of Java Programming
	No	Yes	This course prepares students to program stand-alone applications
	No	No	Introduces students to software testing

# CONTENT STRATEGY

## Content Strategy

**My target audience are professors and students. I am trying to engage to professors as to why project-based learning is more beneficial to students who are struggling the traditional way with some of the IT courses at George Mason University.**

# Conclusion

## Content strategy

My friend and I are two professors and students. I am trying to engage in project-based learning. I want to show examples of project-based learning and how effective it is with our students. There are two examples of the 21st Century Skills framework which include Critical Thinking, Creativity, Collaboration, and Communication (The 4 Cs), Information Literacy, Media Literacy, and Technology Literacy (Library Skills), and Problem Solving, Initiative, Productivity, and Social Skills (PSPS).

## Research Plan

It's a website that will teach a little bit about how traditional learning with IT Skill Development doesn't engage with every learning style and how Project-Based Learning helps focus on kinesthetic (learning by carrying out physical activities), linguistic (learning by speaking), auditory (learning by listening), and visual (learning by seeing).

**Schools are moving towards Project-Based Learning. Developers really need to work in teams to learn how to use each other skills to create a project.**
